Report Dungeon Crawl

How problems I faced.

I was stuck when I was searching for the way to find the key to open the ClotheDoor.. That took me more time to find and I tried searching all folders and files then I came back and found the key.

I made functional mistakes a lot and read the structures again and again. I asked from chat gpt how to type and came back.

The most hard part was eliminating the source. I asked from others

 I got the way by doing a search in the file *OldRecordes.tome*

It was easy to reach the end after those parts.

Where i got a help

Chat Gpt here the link Chat/GPT_report

 I uploaded the chat story because it is not available to take a chat link with visualizations.

Friends.   I got help from friends too in some cases.

My experience.

 First , at the beginning I always hated all the work you gave. but , after several times when I got in to do those works and got results it makes me so proud of myself.

I learned how to get direction to the folders and open files. I got some new functions of AI during the game. Important this is how to open files and how to work with them to give the right commands.

Thanks for fun!

Map side   Here is the link to my Map visualization made by hand.
